

Titanium Mill Products, Ingot, and Castings

U.S. Department of Commerce
BUREAU OF THE CENSUS

JULY 1983

ITA-991(83)-7

Issued September 1983

The statistics in this publication are based on a survey of manufacturers and represent total U.S. shipments of titanium mill products, ingot, and castings. Estimates are included for companies whose reports were not received in time for

tabulation. A description of the survey methodology and related information appears in the January 1983 report for this series, ITA-991(83)-1, issued May 1983.

Table 1. NET SHIPMENTS OF TITANIUM MILL PRODUCTS

Net shipments, total, is the sum of mill product shipments plus mill products consumed in the manufacture of fabricated products, less total receipts. Net shipments for each mill product category also includes the consumption of mill products in that category in the manufacture of other mill products. Detail may not add to the total because of this difference in definition.

Data for sheet and strip, plate, extrusion (other than tubing), pipe and tubing, and other have been combined to avoid disclosing individual company data.

²Source: Bureau of the Census report EM 546, U.S. Exports.

³These values were derived by use of adjustment factors to exclude freight, insurance, and other charges incurred in moving goods to the port of export. This adjustment is made to convert the values to an approximation of the producers' value of exported goods. Current adjustment factors are based on data for 1981 which are published in *Origin of Exports of Manufactured Products*, MB(AS)-5, appendix B. Comparable adjustment factors for earlier years are based on similar factors developed for 1971 and 1972. The current adjustment factor for this report is 0.9731.

⁴Source: Bureau of the Census report IM 145-X, U.S. Imports for Consumption and General Imports.

⁵The value includes c.i.f. (cost, insurance, and freight) at the first point of entry in the United States plus U.S. import duties and other charges to the import point.

⁶Apparent consumption is derived by subtracting exports from the total of net shipments plus imports.

⁷Comparability of output, export, and import classifications for ingot and billet assume that bloom, sheet bar, and slab are reported as ingot or billet in the output numbers. Figures for imports of ingot and billet also include powder, crystal, and similar forms which are excluded from the output and export numbers.
